Testimonial:

“SMS-iT is a must-have software for people who are in sales or marketing industry. You just need to have it to grow your business and expand your reach to acquire more customers.

It allows users to send text messages, promos, reminders, birthday wishes, create text funnels IN BULK! Using both your carrier service via sim card, or via third party apps.

I highly recommend it. It's become my secret weapon. Make sure to check out their Youtube tutorials and walkthrough. The support is extremely helpful as well”

-Johnie Hsu

“Amazing Marketing Software. I love this app because it is a one-stop shop for marketing automation. It is so easy to use and has amazing features that are important for my business. I love that I have the option to send messages to my contacts or my leads, and the app will automatically find out who you're talking too. I love that I can have a branded text message or a generic text message, depending on my needs. The price is also very affordable for the amount of services that I get. I also love that I can track my campaign performance with the software and see who responded and why.”

-Erick Saravia

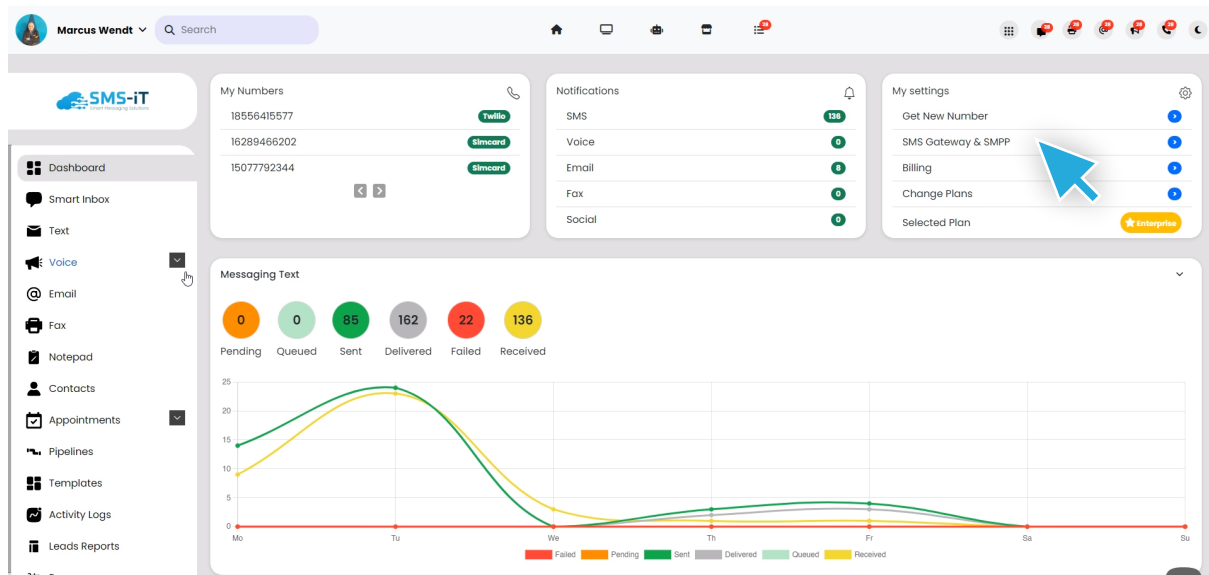

“SMSiT Multiple B2B Businesses all wrapped up in one.: SMSiT is the best stand-alone Text Marketing business in a box I have ever used. I have been using it for almost a year now and it just keeps getting better. I now make a considerable monthly income from this business and it just keeps growing. There are a least 5 businesses you can do from this one business, SMSiT. I highly recommend it for any business out there.”

-Joel Whaley

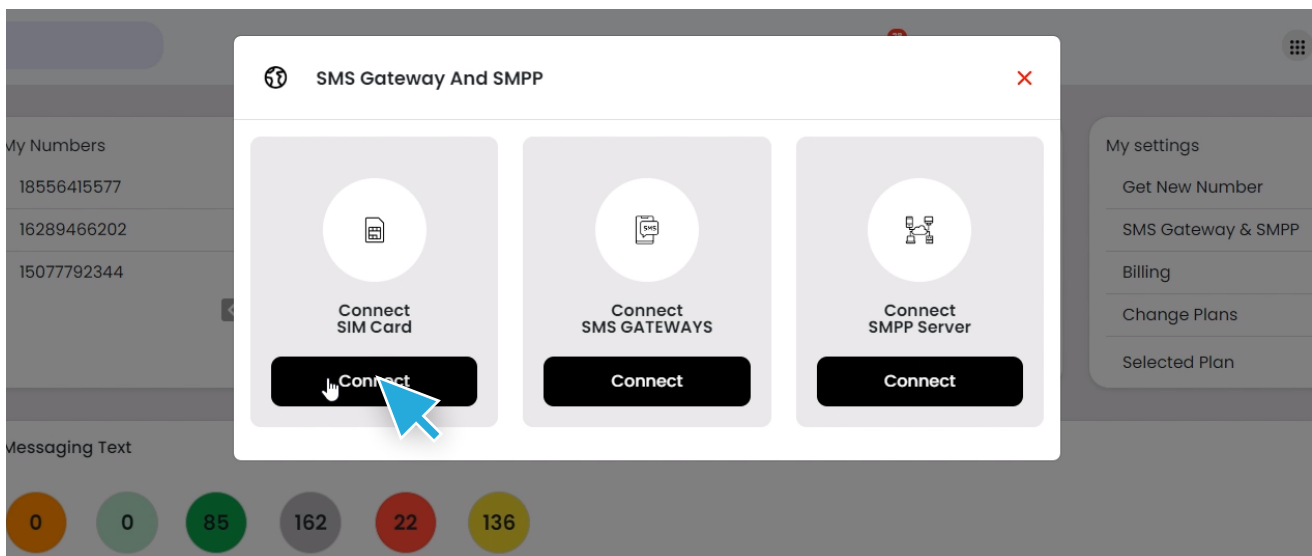

Step 1:

In your main dashboard on the right-hand side click the blue arrow to open up the SMS and SMPP gateway connections.

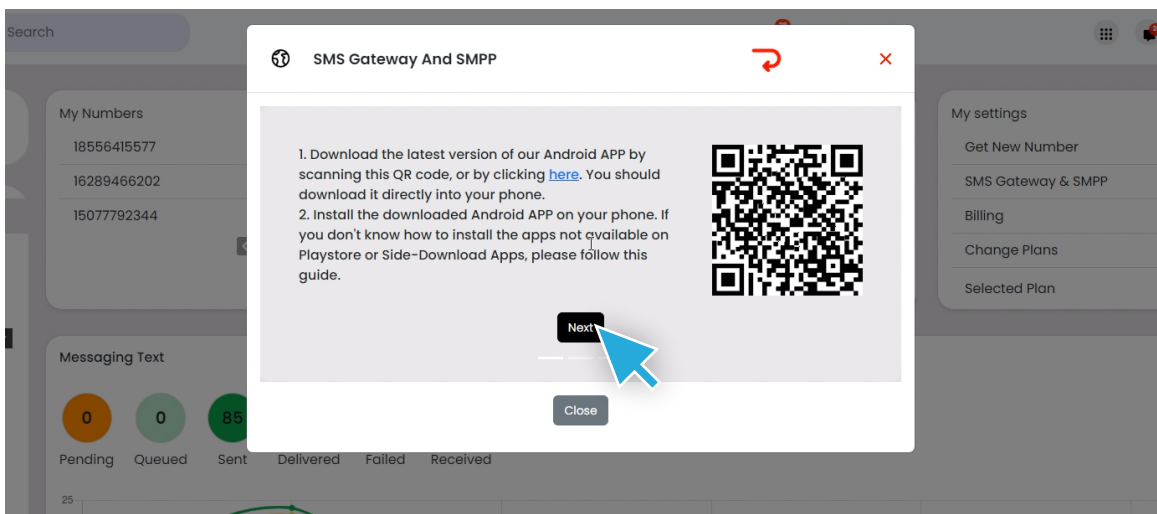

Step 2:

Click Connect under the first option that says “Connect SIM Card”

Step 3:

You'll need to scan this QR code with your camera's phone if you have a higher end phone or download a QR code scanner from the Google Play Store or Apple Store. You will then download and install the app.

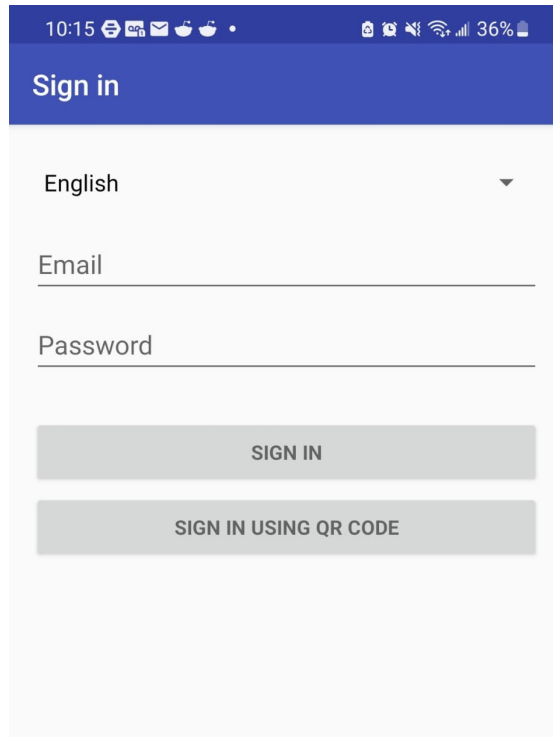

This is what the app looks like installed on your android phone.

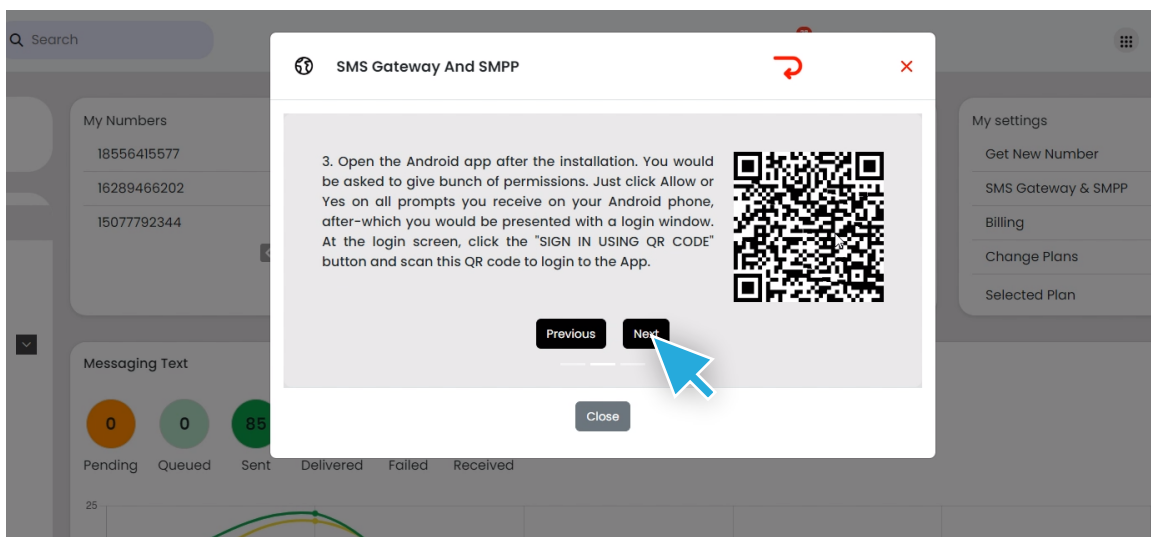

Step 4:

You need to open up the app so that you see this screen. And then tap the “SIGN IN USING QR CODE”

Step 5:

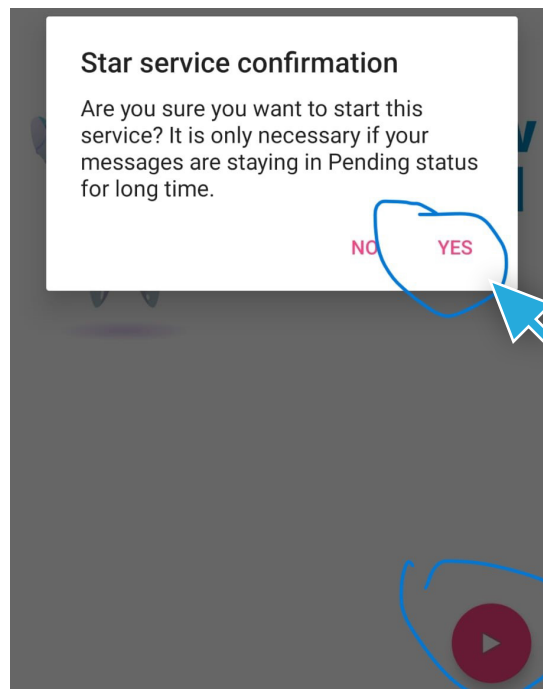

Next, you're going to scan the second QR code from your main dashboard in the SMS-iT CRM as seen below.

You'll then get a screen that shows this.

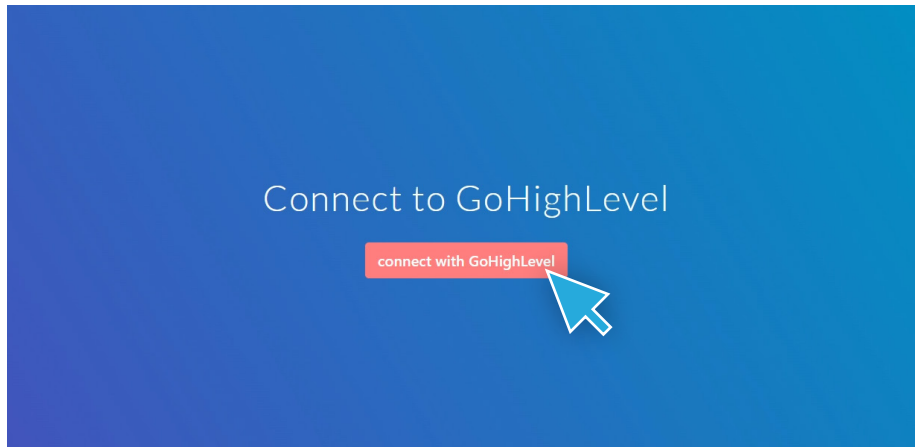

Step 6:
Make sure to press the pink play button to start the service.

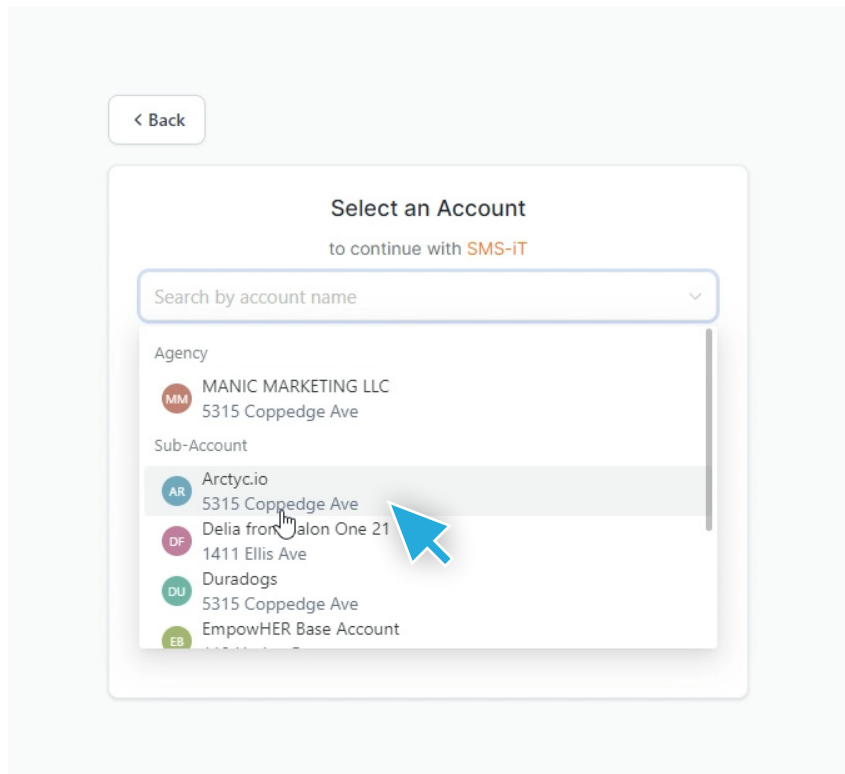

Step 7:

Log into your GHl account. Make sure you have main admin agency account access. And then visit <https://ghl.smsit.ai/>. This is where you're going to click "connect with GoHighLevel"

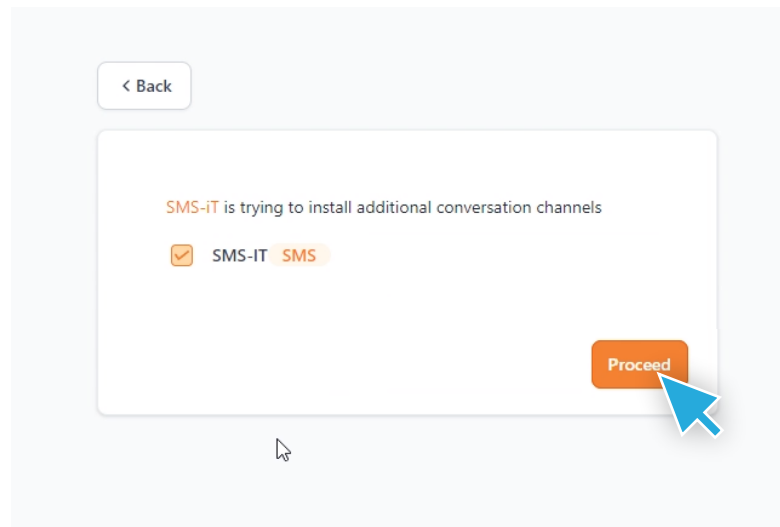

Step 8:

You're going to select the sub-account to where you want to connect your sim card.

Once you click the sub account it will take you to the below screen. Click proceed.

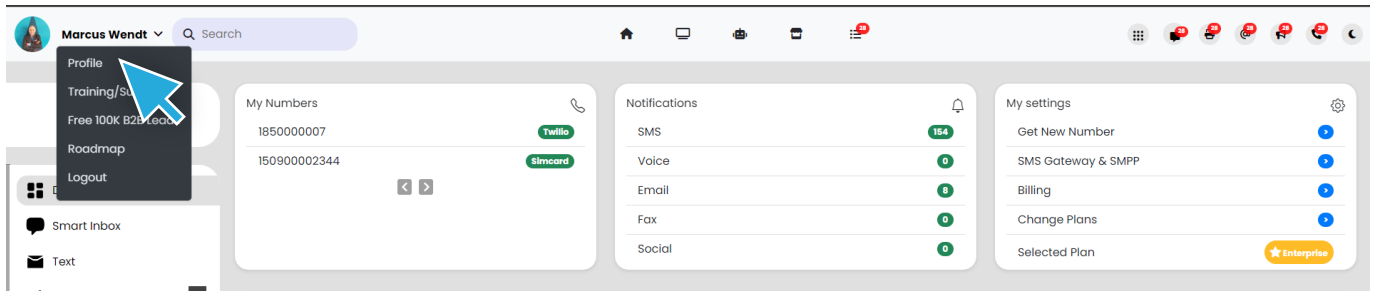

Step 9:

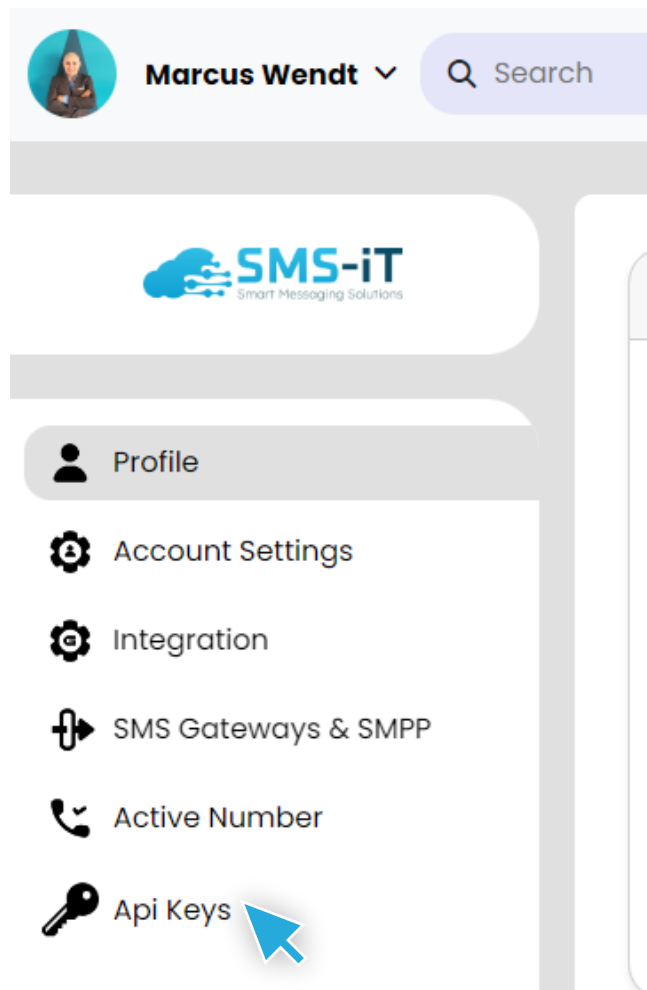

You're going to need to insert the API key that is created in the SMS-iT CRM and then make sure you put in your country code and number. It must be the same for inbound and outbound and do NOT include a + in front of the country code.

A screenshot of a form with a blue background. At the top, it says 'Loading...'. Below that, there are four input fields, each with a label and a help icon (a circle with an 'i'). The labels are: 'location ID', 'SMS-IT API key', 'Inbound numbers', and 'Default outbound number'. At the bottom of the form, there is a red button labeled 'ADD/UPDATE'. A blue mouse cursor is pointing at the 'ADD/UPDATE' button.

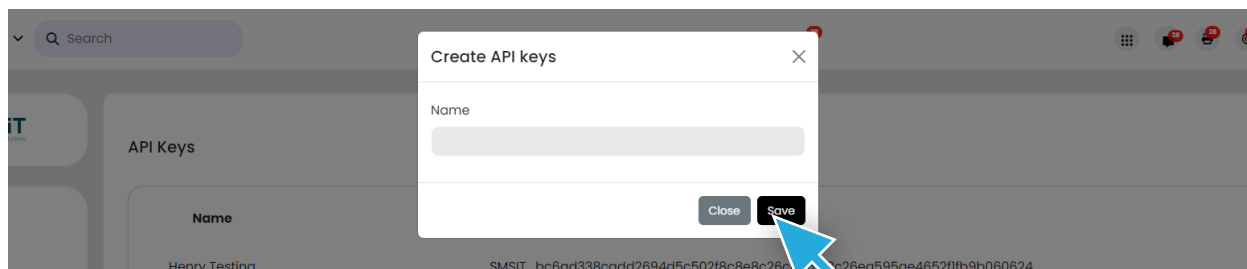

Here's how to create your API key in the SMS-iT CRM. You go to your main dashboard and click the drop-down menu connected to your name and then click on profile

On the left-hand side column menu, you're going to click "API Keys"

Next, you're going to click on the green button "Create New", name the key as "GHL Your Sub-Account" or whatever you need to name it so you remember which key is for each sub-account. Then click save.

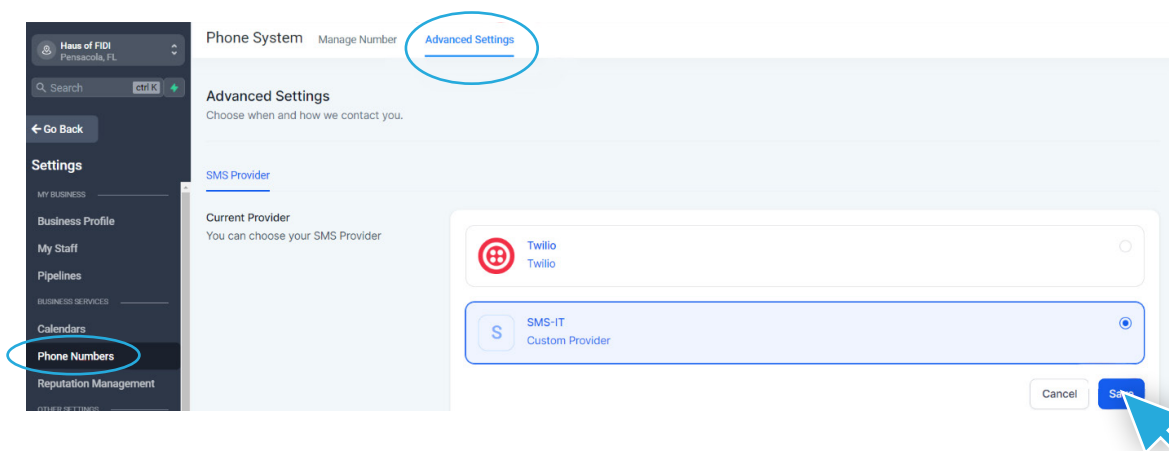

Lastly for the API key creation steps, you're going to copy your key and put it in in the SMS-iT API KEY field as seen in the screen shot at the beginning of Step 9 and then click "Add/Update"

Name	API KEY	
Testing	SMSIT_bc6ad30000004d5c502f8c8e8c26cea6f78c26ea595ae4652f1fb9b060624	  
GHL	SMSIT_f9159b166d80000004b915db46248a7cc027bad1b075e0c2e09cbbf7bfb	  

Step 10:

Go into your GHL account, pick the right sub-account. Go to settings, click on phone numbers, then advanced settings and select the new custom provider that appears called "SMS-IT" and hit save. You're now connected and can send and receive texts within GHL.
